بسم الله الرحمن الرحيم Dr/ Mohammed Ammer

The objectives of this Course

- help student → to understand to using information throughout thier personal & professional lives.

  → beame intelligent of information (مستهلكين للمعلومات)

- Knowing the effects for different (IS) to impact an organization's Competitive advantage. (المزايا التنافسية)
- Knowing the key issues relates to managing (IS) in an organization, including the (IS) strategy, (IS) security, privacy and ethical aspects.
- explain & classify the fundamental Concepts and Components of information Systems including hardware, Software, networks, as well as basic web technologies (تقنيات الويب الأساسية)

System. is a group of sub-Systems that integrate and function together to achive specific task or some tasks.

information System. is a Combination of Software, hardware, and telecommunication (اتصالات) networks to collect useful data, specially in an organization. (مفيد)

بسم الله الرحمن الرحيم

Computer learning.
having skills in using productivity software

Information learning.
understanding the role of information in producing and using business intelligence

Business intelligence: ذكاء الأعمال ← تنبؤية
provides historical, current, and predictive views of business operations and environments.
يوفر رؤى تاريخية وحالية وتنبؤية لعمليات الأعمال وبيئتها.

Data. Data Consists of raw facts.

information. it is a Collection of data organized and processes to become Valuable.

Data ——"processing"——→ information
(input) (output)
have little meaning has meaning and Context

Knowledge: The information, skills, and understanding that you have gained through learning or experience

The characteristics of Valuable information
Accurate - Complete - Economical - flexible - Reliable
Relevant - Simple - Timely - Verifiable - Accessible

Its Importance → failure to achieve it will lead to incorrectes and ill considered decisions.

El Sahhar

تم المسح الضوئي بـ CamScanner

An information System (IS)
is a Set of interelated elements or Components that Collect to meet an objective.

these Components that Collect as ——> (input),
manipulate as ——> (process),
store, and
disseminate as ——> (output) data
and provide a Correction
reaction (feedback mechanisme).
all these Components that help to acheive goals.

Input ——> processing ——> output ——> feedback

Manual information System
Devolping patterns and styles on graph paper for stock analysis.

Computerized information System
using program trading to track the market and trad Lavage blocks of stocks when differences occur.

A Compater Based Information System (CBIS)
- Uses Computers to Collect, process, store, analyze, and distribute information for a specific purpose.
- A Set of hardware, Software, Database, Telecommunications, people, and procedures Configured to Collect, manipulate, store, and process data into information.

بسم الله الرحمن الرحيم

(CBIS)

An IS Generally Consists of six major Components

Hardware:

physically devices and machinery, including the Computer (CPU), input/output, Storage devices.

Software:

programs and instructions that direct the hardware to process data (operating system, apps).

Data & Database:

Data → Raw facts (numbers, text).

Database → An organized Collection of related data.

Procedures:

Rules, policies and instructions on how to operate and use the System.

People:

users, managers, programe, and analysts who operate and interact with the systeme

Networks & telecommunications

Networks → wired or wireless systems Connecting Computers and equipment locally or globally to share resources.

telecommunications → Electronic transmission of signals for Communication.

Internet → The world's largest Computer network (Network of networks).

Simple representation

people + procedures + Hardware + Software + Data + Networks = Information System
