lecture 3

بسم الله الرحمن الرحيم

understanding organizational style and Relationship between Information System

Organizations are built of Conected Subsystems, whose boundaries and enviroments direct how IS is analyzed and designes.

Levels of Management
- Strategic Management
- Managerial planing and Control
- Operational Control

قواعد محددة

1. **Operational:** Manages daily tasks using fixed rules and internal data. مهام داخلية
2. **Middle:** Handles short-term planing using historical and predictive data. بيانات تاريخية وتنبؤية
3. **Strategic:** Guides long-term goals in uncertain environments. بيئة تتسم بعدم اليقين

Each of the 3 levels have →
- Different Organization Structure
- // leadership style
- // Technological Considerations اعتبارات تكنولوجية
- // Organization Culture
- // Human interaction
- all Carry implications for the anlysis and design of information systems.

Information System Categories

- Transactions processing systems (TPS)
  → process daily transactions.
- Office automation Systems (OAS)
  → Improves office operations and Communications.
- Knowledge Work Systems (KWS)
  → Creates and integrates new knowldge.
- Manage Information Systems (MIS)
  → Support data-driven management decisions: ("What if" scenarios).
- Decison Support Systems (DSS)
  → Analyzes harage datasets for Complex problem-Solving.
- Expert Systems (ES) & Artificial Intelligence (AI)
  → Simulates human expertise for decision-making. help human not replace human experts.
- Group Decision Support Systems (GDSS)
  → facilities team decision-making
- Executive Support Systems (ESS)
  → Specialized decision tools for Senior executives

New technologies of information Systems

- E-Commerce: Buying/Selling of goods on the intern
- Enterprise Resorce planing → including (CRM - SCM): unifying Company Systems Like (CRM & SCM)
- M-Commerce: Trading via Smartphones and tables

Information Systems roles in organizational

(IS) play a vital role in organizational success by improving
- "decision-making" helping managers make better decision.
- "efficiency" improving work performance & saving time
- "Customer satisfaction" meeting customer's needs
- "flexibility" helping organizations adapt to changes.

The relationship between IS & organizations

1. Mutual (joint) Impact
   (IS) affect organizational structure, culture, workflow, and vice versa.
2. Decision-Making support
   (IS) processes data to help organizations make informed decisions and acheive strategic goals.
3. Enhancement of Communication and Collaboration
   (IS) improves communication and teamwork.
   (ERP) integrates organizational functions and information.
4. Adaptability and Innovation
   (IS) helps organizations adapt to market changes and innovate.
   Cloud Computing allows easy expansion without major infrastructure changes.

Benifits of (IS) for organizations

1. Increased Efficiency and productivity:
   Automates tasks and improves productivity
2. Cost saving: Reduces cost and excess inventory
3. Better Data Management:
   Stores, analyzes, and retrieves data.
4. Enhanced Customer satisfaction: Improves service and loyality.
5. Competitive Advantage: Analyzes market trends and competitors

بسم الله الرحمن الرحيم

6. Improved Security and Compliance:
Protects data and follows regulations

Organizational Environment

- Community: location, education, income,
  Geographical → Demographic
- Economic: Market and Competition
- political: Government

Open and Close Systems

- open System: Free information flow
- Closed System: Districted information and access

Virtual Organizations

Organizations working from different locations using Computer networks.

Virtual organization Advantages

- Reduced Costs: Less facility expenses
- Faster Response: Meets Customer needs quickly.
- flexibility: Balances work and family.
